After Integrate Flask with Scoring End Point :

TeamID – PNT2022TMID10506

Running After Integrate Flask with Scoring End Point :

The screenshot displays the Visual Studio Code interface. The Explorer sidebar on the left shows a project structure with files like `.vscode`, `ibm.html`, `submit.html`, `app.py`, `car performance`, `car performance.csv`, `CAR_PERFORMANCE...`, and `ibm_app.py`. The main editor area shows the code for `ibm_app.py`, which imports Flask, Flask-CORS, and requests, sets an API key, authenticates with IBM Cloud IAM, and defines routes for a home page and a form. The bottom panel shows the terminal output, indicating the application is running on `http://127.0.0.1:5000` in debug mode.

```
ibm_app.py > ...
1  import flask
2  from flask import request, render_template, Flask
3  from flask_cors import CORS
4  import requests
5  # you must manually set API_KEY below using information retrieved from your IBM Cloud account.
6  API_KEY = "hAaNpiuYlDodbW1xwrpmxZTycNSgMBJW_06m9m2fU2r1"
7  token_response = requests.post('https://iam.cloud.ibm.com/identity/token', data={"apikey":
8  API_KEY, "grant_type": 'urn:ibm:params:oauth:grant-type:apikey'})
9  mltoken = token_response.json()["access_token"]
10 header = {'Content-Type': 'application/json', 'Authorization': 'Bearer ' + mltoken}
11 app = Flask(__name__) # initialising flask app
12 # model = joblib.load('car performance') # load machine learning model
13 @app.route('/', methods=['GET'])
14 def home():
15     return render_template('ibm.html')
16 @app.route('/ibm.html')
17 def formpg():
18     return render template('ibm.html')
```
